

Tempest Manual Addendum

OS Version 1.3

Since Tempest's release, we have created three new operating system updates: 1.1, 1.2 and 1.3. Here is a list of the added features contained in each update:

OS Version 1.3

• Play List	2
• Undo Sound / Revert Sound.	5
• System Screen Reorganized by Category	6
• Assign MIDI Note Numbers for Each Pad.	6
• Selectable Function for Received MIDI Notes	6
• Various Bug Fixes	7

OS Version 1.2

• Polyphonic MIDI Keyboard Play.	7
• Pitch Bend Amount	8
• Undo Record	8
• Sound Bank B.	9
• Odd Time Signatures	9
• USB	10
• Export Multiple Files for Data Backup	10
• Beat-wide effects during 16 Mutes mode.	11
• Improved Sequencer Timing	11

OS Version 1.1

• Reverse Playback	12
• Change Sounds Quickly from "Pads" Screen	12
• Load Drum Kits	13
• Erase All Notes from a Beat.	14
• Time Shift of Individual Notes.	14
• Sync to Other Devices Using MIDI Clock.	15
• Playing Sounds From MIDI; Sending MIDI From Pads	15
• Turn Off Stuck Notes	16
• Master Transpose and Fine Tune	17
• Pad Velocity Curve.	17
• MIDI Local Control	17
• Various Panel Behavior Settings	18
• Manual 1.0 Errata.	19

New in Version 1.3

Play List

The Play List function enables you to create lists of beats that automatically play back in sequence. Though this feature has existed in drum machines for many years, Tempest takes it further: in addition to manually entering a list of beats, you can also create play lists by recording your live beat arrangements (switching between beat pads while playing) in real time.

Each project in Tempest contains 4 play lists, each of which contains up to 99 steps. Each step contains a beat number (1-16) and the number of bars that beat will play. Each play list can be set to either stop or loop back to an earlier step when it plays past its last step. Play lists can not be saved as a separate file, but rather are saved as part of the project when the project file is saved.

The PLAY LIST button toggles Play List mode on or off. If off, the selected beat will play when PLAY is pressed. If on, the selected Play List will play when PLAY is pressed.

The Play List screen

To view the Play List screen, press the PLAY LIST button, then press the EVENTS button. Note that if PLAY LIST is off, pressing the EVENTS key displays the Beat Events screen. If PLAY LIST is on, pressing the EVENTS key displays the Play List Events screen.

Soft Knob 1: Select Step
Turning this knob changes which step is selected for editing. The selected step is highlighted. Turning the knob past the bottom or top of the screen scrolls the screen contents to reveal higher or lower numbered steps. You can also select a different step by using the Up and Down Arrow keys.

Soft Knob 2: Beat
Turning this knob changes the beat number for the selected step. The pad associated with the selected beat is illuminated.

Soft Knob 3: Bars
Turning this knob changes the number of bars that the selected step's beat will play.

Step	Beat	Bars	End
Play List: 1/Favorite arrangement End: Loop to Step 2			
1	12/Four hihat ticks	1 bar (Bar 1)	
2	12/Basic 4-count beat	7 bars (Bar 2)	
4	12/Basic beat with fill	1 bar (Bar 9)	
Insert Step		1200	1. 1. 1 PlayList Events

Soft Key Insert
Pressing this will insert a new step into the play list before the selected step. All subsequent steps will be moved up (down on the screen) by one step to make space for the new step.

Soft Knob 4: End
Turning this knob selects what will happen when the play list plays to its end. The options are Stop or Loop To Step x (any step within the play list).

If SHIFT is on, the soft key and soft knobs 3 and 4 change their function as shown below.

SHIFT ON

**Soft Knob 3:
Select List**
Turning this knob allows you to select one of the four Play Lists.

Step	Beat	Select List	RT Rec: Off
Play List: 1/Favorite arrangement			End: Loop to Step 2
1	12/Four hihat ticks	1 bar (Bar 1)	
2	5/Basic 4-count beat	7 bars (Bar 2)	
3	3/Basic beat with fill	1 bar (Bar 9)	
4	-		
Delete Step		1200	1. 1. 1 PlyList Events

**Soft Key
Delete**
Pressing this will delete the selected step from the play list. All subsequent steps will be moved up by one step to fill the deleted step.

**Soft Knob 4:
RT Record Off/On**
When Real-time Record is Off, Play Lists can only be created manually by entering data into the Play List screen. When RT Rec is On, you may create a Play List by recording a live beat arrangement, described on page 4. This is a System parameter so it always remains as set even after loading a new Project file.
Note: Keep this set to Off when not recording real time play lists, in order to prevent accidentally overwriting your play list steps.

The center area of the screen displays a scrolling window of 4 steps within the selected play list. Each step contains the beat number (1-16) and its name, the number of bars it will play, and the calculated start bar for that step. A triangle on the left edge of the screen indicates which step is currently playing. The highlighted step indicates that it is selected for editing. The Location field (bottom of the screen) displays the bar.beat.tick location within the play list instead of within the beat.

Creating a Play List by Manually Entering Steps

To create a play list manually:

1. Press PLAY LIST to turn on Play List mode. Display the Play List screen by pressing the EVENTS key.
2. If the play list contains steps, either a) delete all steps one at a time [SHIFT + soft key], or b) select a different, empty play list [SHIFT + soft knob 3] or c) from the EDIT menu, initialize the entire play list.

3. Using the STEP soft knob, select step 1.
4. Using the BEAT soft knob, select the beat you wish to play during this step.
5. Using the BARS soft knob, select the number of bars you want this step to play within the play list.
6. Using the STEP soft knob, select the next higher step.
7. Repeat steps 4 through 6 for each additional step you wish to add to the play list.
8. Using the END soft knob, select either a) STOP or b) LOOP TO STEP X [any earlier step], depending on what you wish to happen when the play list plays past the last step.
9. Press PLAY to play your new play list.

Creating a Play List by Recording a Live Beat Arrangement

One of Tempest's performance features is the ability to switch between beats during performance by simply pressing beat pads. As an alternative method of creating a play list, Tempest can automatically record these live beat arrangements, recording each beat change and its duration into successive steps of the play list. Here's how to create a Play List in this way:

1. Press 16 BEATS.
2. Press PLAY LIST to turn on Play List mode. Display the Play List screen by pressing the EVENTS key.
3. Set soft knob 4 (END) to LOOP TO STEP 1 so that when the new play list plays past its end, it will automatically loop back to step 1.
4. With SHIFT on, set soft knob 4 (RT REC) to ON, then turn SHIFT off.

IMPORTANT: With RT REC set to ON, when you start recording your live beat arrangement, any existing steps in the play list will be overwritten! If you're not creating a play list by recording your live beat arrangement, it's better to keep this set to OFF in order to avoid accidentally erasing your play list steps by unintentionally entering Record mode.

5. Press the beat pad that you want your play list to start with.
6. Press the RECORD button to turn Record mode on.
7. Press PLAY to start recording your live beat arrangement into the play list.

The selected beat will automatically be entered into step 1 of the play list.

8. When you want to hear a different beat, press a new beat pad. Notice that the previous step's BARS duration is now set to the number of bars that the previous beat played, and the next step's BEAT field has been filled with the new beat you just selected.

Note: The new beat will start playing at the next Beat Quantize boundary. When recording live beat arrangements into play lists, if Beat Quantize is set to anything shorter than BAR, it is internally forced to BAR. This is because the play lists can change between beats only at bar boundaries.

Repeat step 8 for each additional beat change that you want your play list to contain.

During the last bar of your beat arrangement, do one of the following:

- Press STOP, then press RECORD to turn Record mode off. Press PLAY and your newly created play list will start playing from the beginning.
- Press RECORD to turn Record mode off. At the next Bar boundary, your newly recorded play list will loop back to step 1.

Undo Sound / Revert Sound

If you press SHIFT + UNDO SND, the selected sound will be restored to its last saved status, undoing any edits since then.

Also, if both 16 SOUNDS (in the PAD FUNCTION group) and SOUNDS (in the SCREENS group) are selected, the soft key is now REVERT SND. Pressing it performs the same function as SHIFT + UNDO SND.

System Screen Reorganized by Category

The System screen has been reorganized to more easily find the parameters you are looking for. Instead of one long list, the parameters are now grouped by category into 9 different screens, selected by soft knob 4:

- **General**
- **Foot Pedals**
- **MIDI Remote Pad Play**
- **MIDI Polyphonic Keyboard Play**
- **MIDI Clock**
- **MIDI System Exclusive**
- **BPM/Swing/Comp/Dist Sources**
- **UI Preferences**
- **System Actions**

Assign MIDI Note Numbers for Each Pad

When remotely triggering sounds from received MIDI Note messages, you can now assign which note number triggers each pad. Press System, then use soft knob 4 to select the category “MIDI Remote Pad Play”. You will find 32 new parameters, one for each of the 16 pads in banks A and B, labeled “MIDI Note: Pad A1” through “MIDI Note: Pad B16”.

Selectable Function for Received MIDI Notes

Previously, incoming MIDI Note messages could be used for triggering sounds. Now they can be used to perform any of the 6 Pad Functions that the pads can. This is selected with a new parameter called Pad to Note Mode, located in the System menu, MIDI Remote Pad Play category.

The 4 options are:

1. Follow Pad Func: Incoming MIDI notes will control whatever is selected by the Pad Function buttons, exactly like the pads.
2. Sounds: Incoming MIDI Notes will always trigger sounds.
3. Beats: Incoming MIDI Notes will always select one of the 16 beats.
4. Mutes: Incoming MIDI Notes will always be used to mute/unmute the 32 sounds [16 each in banks A and B].

Various Bug Fixes

A variety of bugs have been fixed, including:

- The Pad Pressure modulation source (in the Mod Paths screen) now supports polyphonic play on the pads during 16 Tunings mode and permits different simultaneous pressure levels when 2 or more pads are held simultaneously.

New in Version 1.2

Polyphonic MIDI Keyboard Play

Tempest now doubles as a 6-voice polyphonic analog keyboard synthesizer, playing the selected sound polyphonically and responding to your MIDI keyboard's sustain pedal and pitch bend wheel. This feature was first implemented in OS version 1.1 but was substantially improved in version 1.2. To use this feature, there are three new settings in the System menu, accessed by pressing the System key.

MIDI: Synth IN Channel: Off, 1...16—Sets the channel on which one of Tempest's Sounds can be played from an external MIDI keyboard or other MIDI controller, or a MIDI sequencer. Used strictly as a MIDI sound module, Tempest behaves as a six-voice analog poly synth. It responds to note messages and the "standard" controllers (pitch bend, mod wheel, aftertouch, channel pressure, etc.), provided that the Sound has those modulation sources routed to some destination.

When used to record notes to Tempest's sequencer, the external keyboard or controller controls the note's pitch, but otherwise acts much the same as recording from a pad: only one note can be recorded at a time. Velocity and duration are also recorded. Timing is subject to the current Quantize setting. Because the sequencer is event-based, continuous controllers such as pitch bend, mod wheel, and aftertouch are ignored.

MIDI: Synth IN Channel must be set to a different channel than **MIDI: IN Channel** in order to function properly. If they are set the same, the note-to-pad mapping detailed under "MIDI: IN Channel" overrides the MIDI: Synth functionality.

Note: Notes played via MIDI are prioritized higher than notes played by Tempest’s sequencer, so the sequencer should not steal voices while notes are playing via MIDI. Notes played by the pads have the same priority as MIDI notes, so they can steal voices from MIDI notes and vice versa.

MIDI: Synth Sound: A1...A16—Used to choose the pad (and its assigned Sound) that plays on the MIDI: Synth IN Channel. Because this is currently a system-level setting, MIDI data will be routed to the chosen pad, regardless of the loaded Beat or Project.

MIDI: Synth Root Note: C0...C10 —Sets the note at which the external MIDI controller plays the Sound at the same pitch as playing it from the pad in 16 SOUNDS mode. For example, let’s say the pad plays the sound as an A. In order to play the Sound from a MIDI keyboard without transposing, MIDI: Synth Root Note should also be set to an A, perhaps A4 or A5 to play in close proximity to middle C on the keyboard.

Also, there is a new setting in the Sounds screens to set to the pitch range of the Pitch Bend Wheel on MIDI keyboards:

Pitch Bend Amount

The bend range of the Pitch Bend wheel on MIDI keyboards is set individually for each sound. To adjust it, select 16 Sounds (in the Pad Function section) and select Sounds (in the Screens section). Then press Page Down repeatedly until the last screen appears, entitled “Misc”. The new rightmost setting is PITCH BEND AMOUNT, with a range of 0 to 12 semitones (one octave). The default setting is 2 semitones.

Undo Record

If the UNDO REC light is on, this means there is something to undo. Pressing UNDO REC will undo all recording changes made during the last recording pass (since you last turned the REC key on) and will turn off the light.

Pressing UNDO REC a second time before starting to record again will *redo* back to the state before you pressed the key. This is a single-level undo/redo.

Note: The Undo Sound function (the Shift function of the same key) is not yet implemented.

Sound Bank B

Sixteen additional Sounds can now be stored and accessed per Beat for a total of 32. Sounds in bank B are designated B1 through B16. Press SOUND BANK B to toggle between banks A and B.

1. While holding COPY to copy a sound, use SOUND BANK B to switch between banks.
2. To erase a Sound in Sound Bank B from a Beat, select SOUND BANK B before or after holding ERASE, and then hit a pad to erase that sound.

Odd Time Signatures

Tempest's beats are no longer limited to 4/4 time signature. Now you can have any time signature with a lower value of 4, 8 or 16, and an upper value of between 2 and 64. However, a beat's total length can be no greater than 64 16th notes (for example, 4 bars of 4/4 or 1 bar of 64/16) and all measures within a beat must have the same time signature. Odd time signatures are implemented in two features: *Initialize Beat* and the new *Change Time Signature of Beat* function.

Initialize Beat

This initializes any Beat to default settings at the specified time signature and number of bars, erasing any previous contents.

To initialize a beat, press ERASE and COPY together to view the EDIT menu, then select INITIALIZE BEAT. Enter the Beat to initialize, the Time Signature and Number of Bars, then press the INIT NOW soft key.

Change Time Signature of Beat

This function allows you to change the time signature of all measures within a beat. If the new time signature is shorter, the notes at the end of each bar will be truncated. Or if the new time signature is longer, the notes at the beginning of each bar will be copied to the end of the bar to fill the new space. You can also change the number of bars in the beat. If the new number of bars is greater, the notes in the earlier bars are copied to the new bar(s) at the end. Or if the new number of bars is lesser, the ending bars are deleted entirely.

To change time signature, press ERASE and COPY together to view the EDIT menu, then select CHANGE TIME SIGNATURE OF BEAT. Enter the beat, new time signature and number of bars, then press the SET SIG NOW soft key.

This function works in conjunction with the UNDO REC function so that your time signature change can be undone. Note that the UNDO REC function is single-level, holding only your last change, so if you change the time signature then record new notes into the beat, you will lose the ability to undo your time signature change.

USB

The USB port on the rear of Tempest can now be used to send or receive any of the MIDI data that the MIDI ports can. In the System menu, there are three new settings that permit you to select the MIDI or USB port for your MIDI data:

- MIDI: CLOCK IN CABLE
- MIDI: CLOCK OUT CABLE
- MIDI: SYSEX IN+OUT CABLE

Also, in the Save/Load menu, the four Export functions (EXPORT SOUND, BEAT, PROJECT OR FILE) now permit you to select either the MIDI or USB port in order to send the MIDI system exclusive data. And if the SYSEX IN+OUT CABLE setting (in the System menu) is set to USB, then MIDI system exclusive transfers received over USB will automatically be loaded, just as with the MIDI port.

Note that USB Sysex transfers are only supported with Mac OSX and Windows 7.

Export Multiple Files for Data Backup

The EXPORT FILE OVER MIDI function (in the SAVE/LOAD menu) now has the ability to export multiple files over MIDI or USB in a single action. This can be handy for backing up many or all of your Tempest files to a system exclusive librarian application on your computer. Note that Tempest sends the multiple files sequentially, one after another, and that system exclusive librarian applications will capture all the files as one large system exclusive dump.

When Tempest exports a file, its location in Tempest's flash memory is remembered within the file. When you later reload the file, it will be loaded into its original location, overwriting any file in the same folder having the same name.

The new Soft Knob 4 has 4 options:

- **FILE:** Select a single file (default setting)
- **FOLDER:** Select all files in the selected folder for export.
- **TYPE:** Select all folders in the selected Type (sound, beat or project) and all files within those folders for export.
- **ALL:** Select all files and folders for export.

For example, if you select “All”, all files of all types in all folders will be exported in one step. A system exclusive librarian application on your computer should be used to capture the entire dump as one large system exclusive file. In the unlikely event of a Tempest failure that causes all data to be lost (or to load the same data into another Tempest), you can send the same file to the Tempest from your system exclusive librarian application.

Note: When sending a large, multi-file system exclusive dump to Tempest from your system exclusive librarian, you should set your the librarian’s settings to include a one-second pause between individual system exclusive messages (the sound, beat or project files). This will insure that Tempest has enough time to respond to each new file in the received system exclusive data stream.

Beat-wide effects during 16 Mutes mode

Before version 1.2, when 16 MUTES was selected, the REAL-TIME FX sliders and sound controls would affect only the selected sound. This is now changed so that when 16 MUTES is selected, the Real Time FX sliders and sound controls affect *beat-wide* effects, just as they do when 16 BEATS is selected. This is more useful during performance.

Improved Sequencer Timing

The timing accuracy of the Tempest sequencer has been improved. When syncing to received MIDI Clock, the timing jitter (timing deviation from source clock) has been reduced from about 5 ms to about .5 ms, a tenfold improvement. The timing jitter in sent MIDI Clock is reduced from about 1 ms to about .3 ms.

New in Version 1.1

Reverse Playback

REVERSE causes Sounds—even completely analog, non-sample-based Sounds—to play in reverse by reversing the envelopes. (Sample-based Sounds also play the sample in reverse.) REVERSE is a real-time, performance control in 16 SOUNDS and 16 BEATS modes and it can also be recorded into a Beat on a per note basis.

While playing a Beat in 16 SOUNDS mode, turning REVERSE on and playing a pad will cause the Sound to play in reverse. While recording a Beat in 16 SOUNDS mode, notes recorded with REVERSE on will record and play in reverse.

Note: Reverse has also been added to the parameter list in the Beat Events screen and can be turned on or off for individual notes. For details about the Beat Events screen, see “Events key: the Beat Events screen” on page 12 of the Tempest Operation Manual.

While playing a Beat in 16 BEATS mode, REVERSE causes all of the Sounds in a Beat—but not the Beat itself—to play in reverse.

Change Sounds Quickly from “Pads” Screen

A new parameter, LOAD SOUND, has been added to the PADS screen in 16 SOUNDS mode, enabling Sounds for the selected pad to be auditioned and changed.

In Pads view, strike a pad to select a Sound and then turn the LOAD SOUND soft knob clockwise to load the first available Sound of the current Sound directory. Continue scrolling through the list to audition different Sounds or use the SOUND DIRECTORY soft knob to change to a different directory of Sounds. Press the REVERT soft key to revert to the saved Sound.

Note: REVERT is available until another pad is struck in 16 SOUNDS mode. Pads can be struck in any other Pad Function mode, but once another Sound pad is struck, REVERT is unavailable. To return to the saved settings, reload the file.

Load Drum Kits

Tempest is now able to load only the sounds from a Beat file, overwriting only the sounds in the destination file. This provides the equivalent of loading drum kits, but with the added flexibility that any Beat file can be used as the equivalent of a “drum kit” file. This is accomplished by an enhancement to the Load Beat function: the ability to load only the sounds or other selective parts of the file.

Press SAVE/LOAD, then select the LOAD FILE option from the menu. In the LOAD FILE screen, select a Beat file to load then press the NEXT soft key. The LOAD BEAT screen will appear, but with a new Soft Knob 1 called LOAD OPTIONS containing five options:

Normal—All Beat data will be loaded into the destination Beat.

Sounds + Mixer—Only the Sounds and mixer settings will be loaded.

Sounds Only—Only the Sounds will be loaded. Use this option to load only the sounds (the drum kit) from the Beat.

Sequencer + Note FX—Only the sequence and Note FX settings will be loaded.

Beat FX—Only the Beat FX settings will be loaded.

For more information, see “Loading Sounds, Beats, and Projects” in the Tempest Operation Manual.

Erase All Notes from a Beat

All notes in a Beat can now be erased in one step, in either 16 SOUNDS or 16 BEATS mode.

In either 16 SOUNDS or 16 BEATS, press and hold ERASE, and then press the ERASE ALL NOTES soft key. All notes in the current Beat are erased.

Time Shift of Individual Notes

Time Shift has been added to the list of parameters in the Beat Events screen. Tempest's sequencer resolution is 96 PPQN (parts per quarter note). Time Shift allows a note to be shifted +/- 3 parts. At 120 BPM, 1 part equals about 5.2 milliseconds.

For details about the Beat Events screen, see "Events key: the Beat Events screen" in the Tempest Operation Manual.

Sync to Other Devices Using MIDI Clock

Tempest can now be synchronized with other devices by using standard MIDI Clock. A new setting, MIDI: CLOCK MODE has been added to the System menu:

MIDI: Clock Mode: Off, Master, Slave, Slave Thru—In **Master** mode, Tempest transmits MIDI clock and start, stop, and continue messages.

In **Slave** mode, Tempest syncs to incoming MIDI clock and responds to start, stop, and continue messages. When slaved to an external MIDI clock, Tempest's Tempo display is preceded by "EXT." The master BPM (beats per minute) is not transmitted via MIDI as a numerical value, so Tempest must calculate the BPM from the incoming clock, and the value displayed by Tempest is subject to rounding and the accuracy of the master clock. In other words, Tempest's displayed BPM value may be slightly different from the master's, even though they're perfectly synced.

In **Slave Thru** mode, Tempest syncs to MIDI clock and forwards incoming MMC and clock messages to the MIDI Out port.

Note: In **Slave** and **Slave Thru** modes, if no MIDI clock is present at the selected input, Tempest will not play.

When clock mode is set to **Off**, MIDI clock is neither transmitted nor received.

Playing Sounds From MIDI; Sending MIDI From Pads

Tempest now has the ability to remotely trigger its sounds from received MIDI Note On messages, as well as the ability to send MIDI Note On messages in response to playing the drum pads. This is provided by two new settings in the System menu:

MIDI: IN Channel: All, 1...16—Sets the incoming MIDI channel for MIDI note-to-pad playback and recording. The note-to-pad mapping is derived from the General MIDI standard drum mapping.

Note	MIDI Note	GM Inst	Pad
A4	69	Cabasa	A1
F#3	54	Tamborine	A2
E2	40	Electric Snare	A3

D2	38	Acoustic Snare	A4
A#3	46	Open Hi Hat	A5
D3	50	High Tom	A6
B2	47	Low Mid Tom	A7
G2	43	High Floor Tom	A8
F5	77	Low Wood Block	A9
D#2	39	Hand Clap	A10
C#2	37	Side Stick	A11
C2	36	Bass Drum	A12
F#2	42	Closed Hi Hat	A13
D#3	51	Ride Cymbal 1	A14
C#3	49	Crash Cymbal 1	A15
G3	55	Splash Cymbal	A16

Note: Notes played via MIDI take priority over notes played by Tempest’s sequencer, just as notes played from the pads do.

MIDI: OUT Channel: Off, 1...16—Sets the channel on which Tempest’s pads transmit MIDI note and velocity data. The pads transmit MIDI data in 16 SOUNDS, 16 TUNINGS, and 16 LEVELS modes. The note-to-pad mapping is the same as what is described in “MIDI: IN Channel,” regardless of the Pad Functions mode. In 16 LEVELS mode, played velocity is ignored and the pad’s assigned velocity level is transmitted.

When set to **Off**, note and velocity messages are not transmitted (but clock and start/stop/continue messages are).

Note: The current version of the OS uses Tempest’s default note-to-pad mapping even in 16 TUNINGS mode, so the transmitted MIDI notes don’t correspond to the notes in the 16 TUNINGS screen.

Turn Off Stuck Notes

Tempest is capable of being played from the internal sequencer, the pads, and the MIDI input simultaneously. If a stuck note should occur, simply press LEFT SHIFT + RIGHT SHIFT + STOP to force all the voices off.

Master Transpose and Fine Tune

The pitch of all sounds can now be adjusted, both coarsely and finely, by two new settings in the System menu:

Master Transpose: -12...+12—Transposes the pitch of all voices in half-step increments, as much as one octave up (+12) or down (-12).

Fine Tune: -50...+50—Transposes the pitch of all voices in one cent increments, as much as a quarter-tone up (+50) or down (-50).

Pad Velocity Curve

A new setting in the System menu, PAD VELOCITY CURVE, permits the velocity response curve for Tempest's pads to be selected from four different sensitivity levels from 1 to 4. The default value is 2.

MIDI Local Control

This new addition to the System menu performs a similar function to MIDI Local Mode on keyboard synthesizers-- it internally disconnects the drum pads from the sound generator. This is useful, for example, if you are using Tempest with an external MIDI sequencer and wish to avoid sounds playing twice for each pad hit, due to notes being sent and rerouted back over MIDI to Tempest. When **Off**, the pads transmit note and velocity messages via MIDI as normal, but will not cause Tempest's internal sounds to play. By default, this is set to On.

Various Panel Behavior Settings

These five new settings in the SYSTEM menu permit you to customize the behavior of certain panel controls.

Touch Slider Latch Mode: Active Only, All—When set to **Active Only** (the default) and LATCH ON is active, the latched slider value is reset to 0 when switching between FX1 and FX3, playing another pad, or switching between 16 SOUNDS and 16 BEATS modes. FX2 and FX4 behave similarly.

When set to **All** and LATCH ON is active, the slider values stay latched for a given Sound, even when switching among FX1, FX2, FX3, and FX4, playing other pads/Sounds, or switching between 16 SOUNDS and 16 BEATS. Turning latch off resets all latched values to 0.

For details about the touch sliders, see “Real Time FX” on page 35 of the Tempest Operation Manual.

Latch Button behavior: Normal, Shift Switched, Disabled—In **Normal** mode, the touch slider remains at the last value when LATCH ON is active.

In **Shift Switched** mode, the un-shifted and shifted behaviors are swapped. That is, the LATCH ON buttons now switch between FX1 and FX3 or FX2 and FX4. SHIFT + LATCH ON turns latch on and off.

When set to **Disabled**, the LATCH ON buttons simply switch between FX1 and FX3 or FX2 and FX4 and the latch function is disabled.

For more details about LATCH ON, see “Real Time FX” on page 35 of the Tempest Operation Manual.

Envelope Amount Encoder behavior: Normal, Shift Switched—In **Shift Switched** mode, the un-shifted (AMOUNT) and shifted (VELOCITY AMOUNT) behaviors are swapped. That is, when SHIFT is off, the encoder controls VELOCITY AMOUNT and when on, AMOUNT.

Select Sound behavior: Shift On + Pad, Shift Held + Pad—The default behavior (**Shift Held + Pad**) is slightly different from what is described on page 5 of the Tempest Operation Manual. To select a Sound for editing without playing the Sound, hold SHIFT down and press the desired pad. When set to **Shift Held + Pad**, the pads can still be played when SHIFT is on.

When set to **Shift On + Pad**, SHIFT must either be on or held down to select the Sound.

Tap Tempo behavior: Shift On + Play, Shift Held + Play—With Tempest's default behavior (**Shift Held + Play**), must be held to tap the tempo. Otherwise, Play starts/restarts the Beat, whether SHIFT is on or not. When set to **Shift On + Play**, Play is used to tap the tempo when SHIFT is either on or held down.

Manual 1.0 Errata

Assignment of an expression pedal to Note FX 1 through 4 in the System menu is not yet implemented.
